How does the crimp hair styling iron EMS-7116 work:

Before we start to styling crimp hair, we need to get the hair ready to styling, such as wash hair and blow dry, then brush it very nice and smoothly.

Separate the hair into two large section: top and bottom, generally we styling our hair from bottom to top, but it's depends on your styling habit.

Slide the bottom to the on position, the iron will start to heat up, at the beginning, we could set the temperature to a medium grade, such as our hair iron temperature setting is 140C-160C-180C-200C-220C, we could set the temperature to 180C in case the very high temperature will damage your hair.

Separate a small section of your hair, and place the hair crimp iron to root, and squeeze the crimper for a couple of seconds, and release them, but please make sure you are lining up the crimps each time , so there's a nice continuity.

Then, do the same movement same as the other sections.

Take a wide teeth brush or use your fingers brushing your hair.
