How to use it:

FBT is a manufacturer of hot hair tools and use salon expertise to create best performing hair tools that are designed to help you achieve a salon finish at home.

Preparation: First ensure hair is completely dry before use, Applying a heat protectant or a thermal spray creates a protective barrier between the hair and the iron so that the hair doesn't "frizzle" and burning.

Straighten hair in sections for ideal results: start from root to tip, being careful not to touch the scalp. Slide the iron slowly and evenly along the hair bending the iron in or out at the bottom to achieve the desired shape at the ends of the hair.

Curls: Starting close to the scalp, clamp the iron closed and turn it back on itself a half turn (the same as with flicks). Run the iron slowly down the hair shaft to the end. the slower you move the iron, the tighter the curl. The faster you move the iron, the gentler the wave.
