How to use a curling wand:

Plug in and turn on the curling wand, waiting to heat up.

I used the 210C temperature setting for my thick and coarse hair. I usually need high temperature to get my hair to respond.

But everyone's hair is different, so start somewhere in the mid-range, and bump it up higher if you need more heat.

Take a small section of your hair. The titanium barrel is smooth, wrap your hair around it.

When you have warped the hair around the barrel, stop for a few second, then release your hair.

Repeat until you have the entire hair curled.

This curling wand gives your hair such volume and natural looking waves.

You can spary when you have finished all the curls.
