Useful tips for curling iron F998B:

1. Moisturize your hair, it is important that your hair is well-moisturized especially if you are using it often.
2. Choose the right barrel size for curling tongs, the large size for big, bouncy curls, while the small size for tight curls.
3. Choose ceramic and tourmaline curling irons, they are less damaging to your hair. Ceramic curling iron can heat hair evenly, while tourmaline curling iron has negative ions that seal the cuticles of the hair to preserve the moisture in it.
4. Choose the right temperature. If you have fragile, colored hair, go for the lowest setting. On the other hand, if you have coarse hair, you can go a little bit higher.
5. Use heat protectant products before styling, this will help to minimize the damage to your hair.
6. Do not use curling iron when hair is wet or damp, applying heat on wet or damp hair can cause damage and breakage.
