### **How to use classical tourmaline digital flat iron F108C:**

Classical tourmaline digital flat iron F108C is a professional hair flat iron we design not only for straightening hair but also curling hair, but today, we mainly show you how to straightening hair by this classical hair flat iron F108C.

First of all, we can wash our hair and blow dry, and switch the hair flat iron on and gets to styling. In order to makes the hair flat iron more effectively, we could separate hair into two large sections, and binding the top section first. The bottom section needs to section several small sections. At the beginning of the styling, we shouldn't set the temperature too high, but the temperature

depends on your hair texture, we could set a medium temperature.

Take a small section, and put the hair flat iron close to root, and clip it.

Slide the hair flat iron from root to tip down slowly. At that moment, we need to pay attention to the sliding speed, never stop to a position on your hair, and never get your way down too fast.

Stop to a position will damage you hair because of the sustaining high temperature, and get down too fast, the temperature can't pass through to you hair and will reduce the straight effect.
