Delivery details:	30 days after deposit

How to use:

1. Let cord out and plug in
2. Turn the power switch to "on". The LCD screen display will light.
3. The F601HC has heat settings ranging from 130°C to 230°C. To adjust the heat setting simply click the temp button up or down until the LCD screen reading your desired temperature. Before using the styler ensure your hair is dry. Using a heated styler on wet hair can damage the hair cuticle.
4. The styler will be easier to use if you separate the hair into sections. Pass the styler through the hair at a steady, controlled pace.
5. The styler will automatically shut-off when not in use for 60 minutes. Turn the switch back on to reheat.
6. When not in use for any extended period of time it is highly recommended you place the styler in the provided heat resistant cap for safety and to prolong the life of your styler.
7. After use, turn the power off, unplug the cord and keep it in a safe place.(Do not wind the cord around the styler.) Allow the plates to cool before storing. When the styler has cooled fold the cord in the same way as it was first delivered in its packaging. We recommend using the provided heat resistant cap and heat resistant pouch when storing your styler.
