Delivery detail:	30 days after deposit

Instruction:

Let cord out and plug in.

Turn the power switch to “on”. The blue LED light display will illuminate.

The X styler has heat settings ranging from 150°C to 230°C. To adjust the heat setting simply click the inside temp button up or down until the blue LED light is positioned on your desired temperature. The blue LED light will flash while the plates heat up and will then become a solid blue light once the plates are fully heated.

The X styler has a very special X plate. This will enable you to use the it to style your hair and make curls more easily than normal flat irons. We suggest you start at lower temperatures and increase the heat until you reach the temperature that works best for your hair type.

Before using the styler ensure your hair is dry. Using a heated styler on wet hair can damage the hair cuticle. The styler will be easier to use if you separate the hair into sections. Pass the styler through the hair at a steady, controlled pace.

The styler will automatically shut-off when not in use for 60 minutes. Turn the switch back on to reheat.

When not in use for any extended period of time it is highly recommended you place the styler in the provided heat resistant cap for safety and to prolong the life of your styler.

After use, turn the power off, unplug the cord and keep it in a safe place.(Do not wind the cord around the styler.) Allow the plates to cool before storing. When the styler has cooled fold the cord in the same way as it

was first delivered in its packaging.
